

750mm Continuous Deck Rail

The 750mm long plastic Deck Rail is a continuous spacer which is strong and stable for formwork applications. The Deck Rail is designed with sets of vertical legs at approximately 75mm centres, allowing a free concrete flow. The legs have pointed tips on the base for minimal form contact. Deck rails have a clip connection system at each end to enable joining to any given length on site. Once connected the clip will not separate.

Tested to AS/NZS 2425:2015
