

Baseless Combination Panel Chairs

Baseless Panel Chairs are used extensively in precast applications. They have been designed to support single layered mesh in tilt-up, precast panels and some suspended deck applications.

Pointed legs ensure minimum visibility on the surface of the concrete. The chair is coloured a consistent grey to match the concrete.

The easy push on clip mechanism allows for the chair to swing into a vertical position, when lowering the mesh into the form and suits all mesh sizes including Y12 bars.

Tested to AS/NZS 2425:2015
