

Plastic Top Deck Spacers

Top Deck Spacers have been designed to support both top mesh and top reinforcing bars in suspended decks, thick precast and tilt-up panels and any tall spacer applications, where strength and stability is critical

The spacer leaves a minimal foot print and is supplied in grey colour.

An added feature is a cross bar between the dual supports, to allow tying the reo with wire, if required.

Tested to AS/NZS 2425:2015
